Ground truth and actual predictions: three streams and fusion

SOC best epoch 10 | qualitative examples; full fusion test evaluation not yet complete

GT: native 640 × 480 | Predictions: actual 30 × 40 outputs, bilinear-expanded. Fixed grayscale ranges; no per-image normalization.
O: fixed-camera workspace only. S/C/Fusion: no masks. Five examples selected before inspecting prediction quality.

Standalone center target

Observed scene RGB

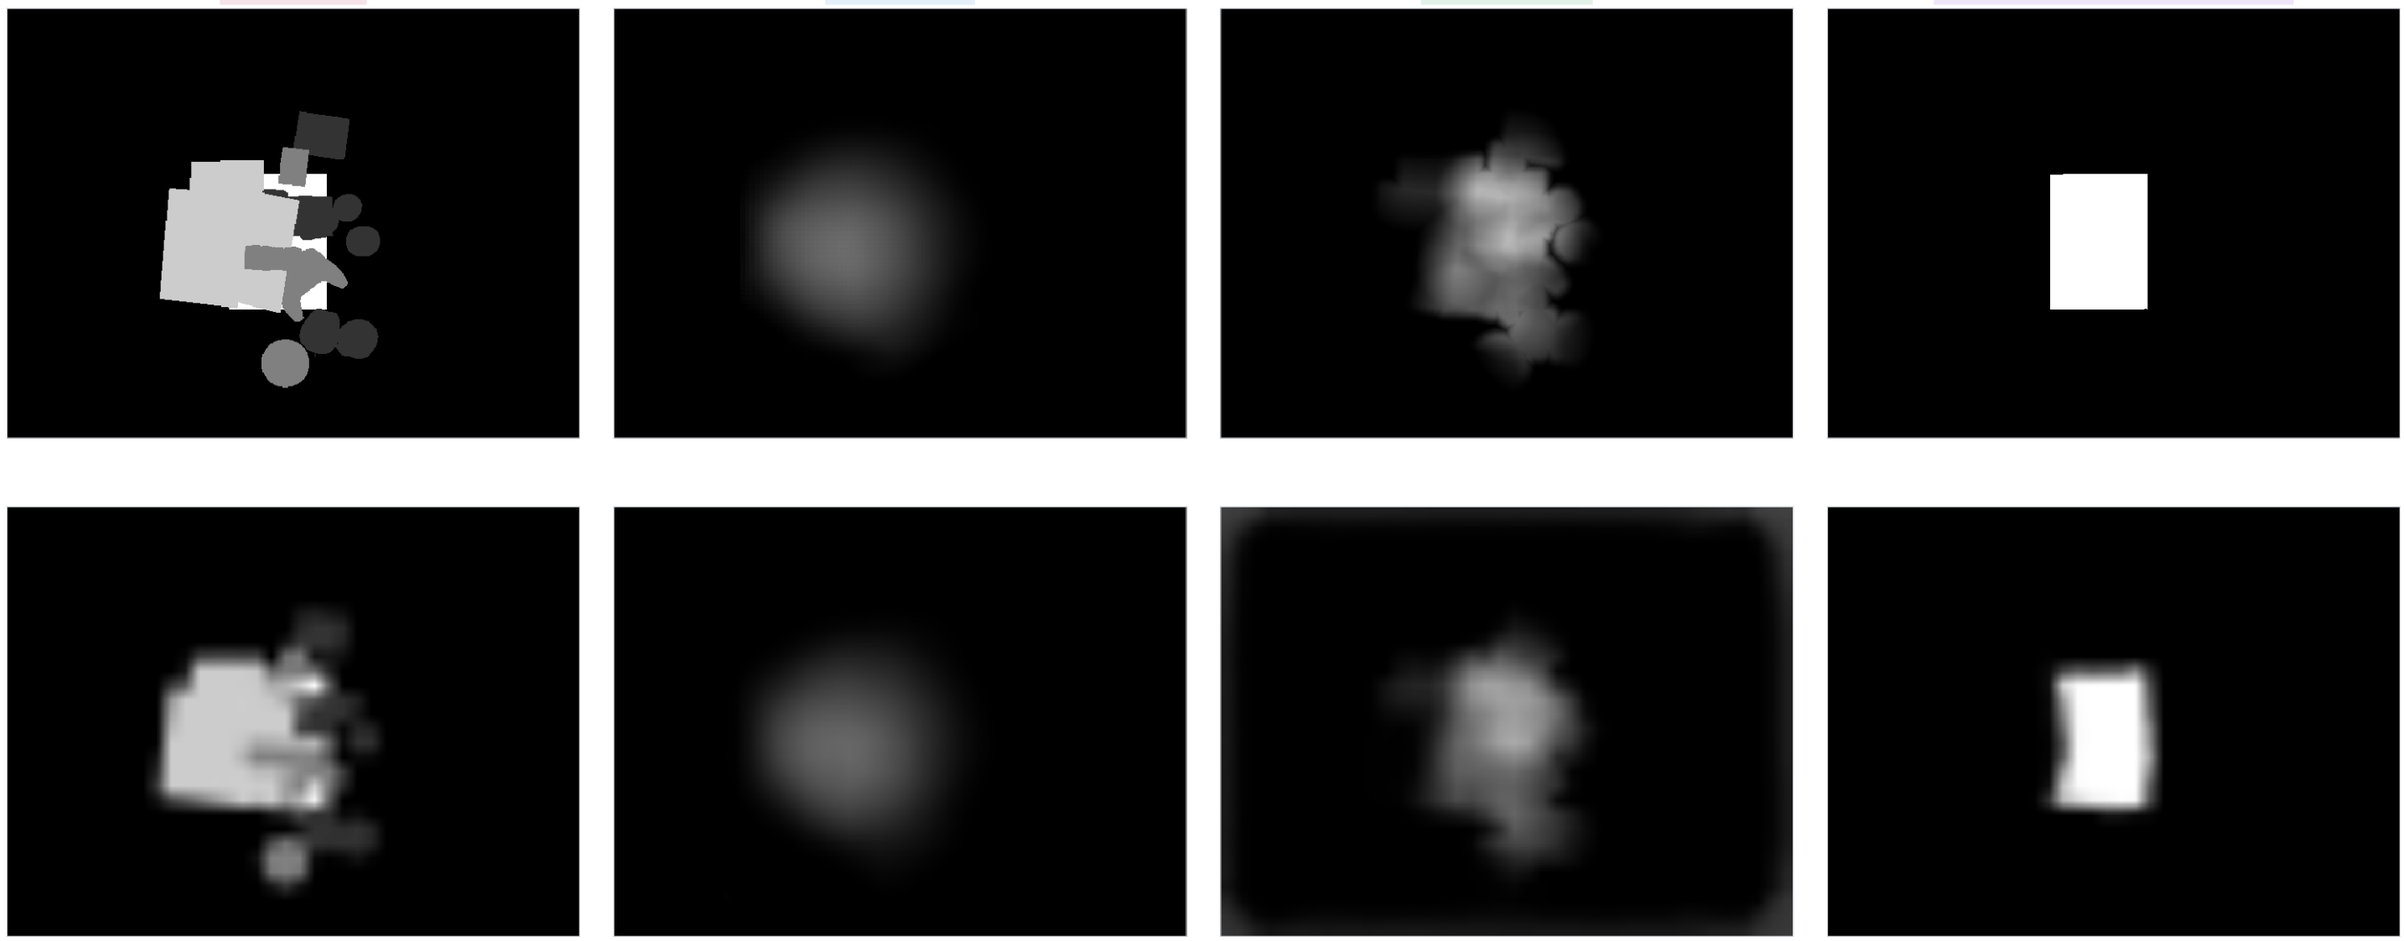

Actual frozen S20 / O12 / C19 + trained SOC epoch 10

Qualitative example; full fusion test evaluation not yet complete.
Native GT above / bilinear-expanded prediction below.
O prediction uses the fixed-camera workspace only.
Fusion predicts the amodal target mask; no GT or workspace mask is applied.
